

Fitting the data cable clip into the Ai2 robot's battery box

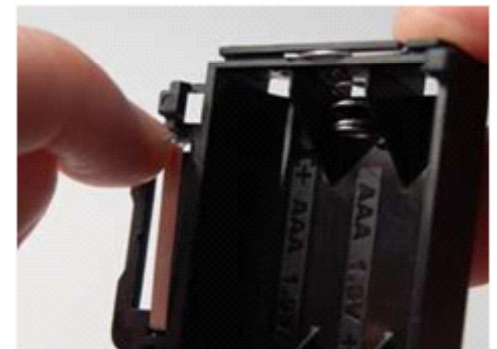

You will need the Ai2 robot's battery box and data cable clip.

First insert one end of the data cable clip into the rectangular hole as shown.

Then insert the opposite end of the clip. You will need to use your finger nail to lever it into position.

This is how the battery holder should look once the data cable clip has been inserted.

When plugging in the data cable the metal clips on the plug face the battery holder as shown below.

If you have trouble downloading your programs try holding the plug straight or apply some downward pressure to the plug.
